Industrial Steel Buildings

Everything Under One Roof

To go with our huge range of Steel Buildings we can also take care of all of the ground works and installation with our highly rated site team.

We love to go above and beyond the needs of the customer to ensure that you get the Steel Building that you deserve.

- MOT bays, valeting & bodyshops
- Warehousing & Distribution
- Offices & trade Counters
- General Purpose Industrial Units
- Recycling and Waste Transfer Stations
- Coffee/Farm shops & Meeting Rooms
- Ground Maintenance Workshops
- Vehicle & Plant Storage Buildings
- Sports & Recreation
- Storage Buildings
- All Agricultural/Aquacultural Buildings
- Home Based Businesses
- Custom Applications

Advantages of Steel Framed Buildings

1. **Strength and durability:** Steel is one of the strongest construction materials available, making steel frame buildings highly resistant to natural disasters such as earthquakes, hurricanes, and fires.
2. **Cost-effective:** Steel frame buildings can be cheaper to construct than traditional concrete or wood frame buildings due to their efficiency in manufacturing and installation. Additionally, steel frames require less maintenance and have a longer lifespan, reducing long-term costs.
3. **Design flexibility:** Steel allows for large, open floor plans and wide-spanning spaces without the need for interior support columns.
4. **Speed of construction:** The prefabricated components of steel frame buildings can be manufactured off-site, allowing for faster construction time on-site.
5. **Sustainability:** Steel is highly recyclable and can be reused or recycled when a building reaches the end of its lifespan. Additionally, steel frame buildings can accommodate various energy-efficient features such as insulation, solar panels, and green roofing systems.
6. **Versatility:** Steel frame buildings can be used for a wide range of purposes, including residential, commercial, industrial, and institutional buildings. They can also be easily modified or expanded if needed.
7. **Resistance to pests and decay:** Unlike wood frame buildings, steel frame buildings are not susceptible to termite damage or rotting. This makes them a more resilient and low-maintenance option.
8. **Consistency and quality:** Steel frame buildings are manufactured under controlled factory conditions, ensuring consistent quality and precise specifications. This can lead to fewer construction defects and improved overall building performance.
